                                                                                                                                                                                                                                                                                                                                                     The present invention describes human secretory phospholipase A2 (PLA2). PLA2 has antiallergic, antiinflammatory, antibacterial, tranquillser, immunosuppressive, vulnerary, antirheumatic and antiarthritic activities. Human secretory phospholipase A2 (PLA2), the gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. The

This protein is involved in the hydrolysis of membrane phospholipids. The protein and its coding sequence can be used to diagnose and treat the following: cancers such as prostate, breast and testicular cancers, autoimmune and inflammatory disorders such as AIDS, allergies, anaemia, asthma, atherosciercosis, Crohn's disease, diabetes mellitus, emphysema, Graves, disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, psoriasis, rheumatoid arthritis and systemic lupus crythematosus, infection caused by viruses, fungi, bacteria, parasites and protozoa, and reproductive disorders including infertility, disruptions of the menstrual cycle, polycystic ovary syndrome, ectopic pregnancies, disruptions of spermatogenesis, cancers within the reproductive tract and

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a

The invention relates to polynucleotides encoding proteins CG122, CG179, CG95, CG121, CG162, CG179, CG185, CG170, CG183 and CG168 which are related to proteins involved in lipid metabolism and cardiovascular disease such as human apolipoproteins, lipsaes and lipoprotein receptor proteins. These DNA and protein sequences are useful for treating or preventing disorders associated with apolipoproteins, lipsaes and lipoprotein receptor (ALLr) expression and for treating ipid metabolism, cardiovascular diseases and thrombosis. Antibodies against these proteins are useful for determining the presence of or predisposition to a disease associated with altered levels of these sequences. ALLr polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them and cells expressing ALLr proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of this polypeptide. Vectors comprising these DNA and protein sequences are also useful for producing ALLr proteins.

The nucleic acids and polypeptides of the invention are also useful for the treatment of occlusive cardiovascular diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DWCCQTHDCCYDHLKTQGCGIYKDYYRYNFSQGNIHCSDKGSWCEQQLCACDKEVAFCLK 120

they are expressed in, such as: antinflaematory, antirheumatic, antiarthritic; immunosuppressive; antiantlaematory, antirheumatic; antiarthritic; immunosuppressive; antianterial; endocrine, cardiant; central nervous system; virucide; anti-HIV; fungicide; antianutagen; cardiovascular; antianemic; antiadgaregant; haemostatic; vulnerary; antianemic; antianterial; antiallergic; antiasthmatic; antiallergic; antiasthmatic; antianterial; neuroprotective; antialepressant; noctropic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for sponding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, antenimunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, cancemia, platelet disorders, thrombocytopaenia, allergic chinitis, asthma, diabetes, cancer, multiple sclerosis, depression, Alzheimer's disease, Parkinson's disease, neurodegenerative and neurological disorders AAH99166 to AAH99904 encode the human proteins given in AAW25225 to AAW25963. The proteins can have activities based on the tissues and cells

The Invention Laters to a mammanian sector of 3 top in sector of phospholipase A2 (SPLA2) (1), where the entryme is Ca2+ dependent, phospholipase A2 (SPLA2) (1), where the entryme is Ca2+ dependent, composition comprising (1) is useful for treating or preventing viral and composition comprising (1) is useful for treating or preventing viral and composition compraining capable of inhibiting catalytic activity of (1), biologically active compounds that bind sPLA2 receptors, or a compound that modulates cell roliferation, cell migration, cell contraction or apoptosis is useful for treating disease states or disorders involving group IIF sPLA2, such as inflammatory disease, cancers, cardiac and brain ischaemia, acute lung injury, acute respiratory distress syndrome or crohn's disease. Specific antibodies are useful for searching new secreted mammals. The encoding polymucleotides and vectors are useful for transforming animals and establishing a line of transgenic animals.

**Coth of the compound of transforming animals are such the dIFF sPLA2 enzyme

**Coth of the coth of transforming animals are useful for transforming animals are such the dIFF sPLA2 carging to the animals.

                                                                                                                                                                                                                                                                                                                                                                                  righties the sequence of an isolated inductor and mouration which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1031 genes up-regulated or down-regulated in specific cancers (e.g. about 1031 genes up-regulated in regulated gene nucleotide sequences which encode the proteins given in ABR58521 to ABR58709. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid, (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a cancer of the nucleic acid is useful for therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, bladder, brain, breast, carvix, colon/rectum, kidney, lung, ovary, pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in the control of the pathology of

The invention describes a mammalian secreted group IIF phospholipase A2 (SPLA2), which is Ca2+-dependent, maximally active at pH of about 7-8, and hydrolyses phosphatidylelyen with about a 15-fold preference. The mammalian secreted group IIF SPLA2 protein or nucleic acid, or a pharmaceutical composition is useful for treating and/or preventing viral infections, bacterial infections, or cancers. The inhibitors of SPLA2 or a composition comprising sPLA2 inhibitors is useful for treating disease states or disorders involving group IIF SPLA2, e.g. inflammatory diseases, cancer, cardiac and brain ischaemia, acute lung injury, acute respiratory distress syndrome, or Crohn's disease. The enzyme is also useful for screening various chemical compounds for treating these diseases. This is the amino acid sequence of human group IID phospholipase A2 used to determine a consensus sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 DWCCQTHDCCYDHLKTQGCSIYKDYYRYNFSQGNIHCSDKGSWCEQQLCACDKEVAFCLK 120

Human secretory phospholipase A2 (PLA2), the gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. The present sequence represents mouse PLA2, which is used in an example from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a mouse secreted phospholipase A2 (secreted database, and a fragment (AAA7207) was isolated from CDNA derived from several mouse tissue types using primers AAA72078-A72081). The full length cDNA was generated using primers AAA72082-A72081. The full relates to the novel secreted PLA2, nucleic acids encoding it, and variants of the protein which retain phospholipase A2 activity. It also encompasses an expression vector and host cells comprising DNA encoding murine secreted PLA2, a method for the recombinant production of the protein, a method of screening potential inhibitors of the protein and the compounds thus identified, and an antibody specific for murine PLA2. The antibody can be used for the diagnosis of a variety of diseases
                                                           Secreted phospholipase A2; PLA2; mouse, murine; recombinant production; antibody; diagnosis; drug screening; expressed sequence tag; EST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; PRO; promotion; inhibition; angiogenesis; cardiovascularisation;

The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA7721 and AAB24388 to AAB24435 represent nucleotide and protein sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorders in mammals.

ζ,
                                                                                                                                                                                     AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                       New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions.

                                                                                                                                                                  The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human secretory and transmembrane; PRO; mammalian; cancer; lung; breast; protetate; cervical; tumour necrosis factor-alpha; TNF-alpha; cartilage; ear; proliferation; glucose; free fatty acid; skeletal muscle; adipocyte; A-peptide; factor VIIA; gene therapy.

ANUI2172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO breast, prostate, rectal, cervical or liver tumours by comparing PRO breast, prostate, rectal, cervical or liver tumours by comparing PRO olypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the peliferation of inner ear utricular supporting cells or of T-pyphocytes, the proliferation of endothelial cells or of T-pyphocytes, the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor villar. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymolectice encoding PRO involved in binding interactions. The polymolectice encoded in province to the province of the province to the province to the province of the province of the province to the province of the province of the province of the province to the province of the province to the province of the provin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated , secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumors e.g. lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MELALLCGLVVMAGVIPIQGGILNLNKMVKQVTGKMPILSYWPYGCHCGLGGRGQPKDAT 60

Patent No. 5972677

GENERAL INFORMATION:
APPLICANT: Tischfield, Jay A.
APPLICANT: Seilhamer, Jeffrey J.
TITLE OF INVENTION: Mammalian Phospholipase A2 Nucleotide
TITLE OF INVENTION: Become and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Sequences Having Internal Ribosome Binding Sites
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:

phospholipase A2 (EC 3.1.1.4) - Bothrops asper
C;Species: Bothrops asper
C;Date: 19-Mar-1997 #sequence_revision 19-Mar-1997 #text_change 31-Oct-1997
C;Accession: S13900
R;Francis, B.; Gutierrez, J.M.; Lomonte, B.; Kaiser, I.I.
Arch. Biochem. Biophys. 284, 352-359, 1991
A;Title: Myotoxin II from Bothrops asper (Terciopelo) venom is a lysine-49 phospholipase
A;Reference number: S13900; MUID:91112832; PMID:1899180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     myotoxin precursor - southern copperhead
